

Problem Statement

You are a Product Manager at **IndusInd General Insurance**, tasked with re-imagining how customers discover, purchase, and manage general insurance.

While insurance is one of the most important financial products, the customer experience remains fragmented. Users often purchase policies through different channels, struggle to understand coverage, forget renewals, face confusing claim processes, and rarely engage with their insurance until something goes wrong.

As a result, insurance is viewed as a one-time transaction rather than an ongoing protection service.

Market Insights

The Indian general insurance industry is rapidly digitizing, yet customer experience continues to lag behind.

Key observations include:

- Customers often own multiple insurance policies across different providers with no unified management experience.
- Insurance products remain difficult to understand due to technical jargon and low transparency.
- Claims continue to be perceived as slow, stressful, and documentation-heavy.
- Young, digital-first customers expect proactive reminders, personalized recommendations, and self-service experiences.
- Banks already possess strong customer relationships, financial data, and trust, creating an opportunity to become a one-stop protection platform instead of simply acting as insurance distributors.

Your mission is to conceptualize a mobile-first insurance platform that transforms insurance from a reactive product into a proactive protection ecosystem, while strengthening customer engagement within the IndusInd Bank ecosystem.

Business Objective

Design a unified insurance platform that enables IndusInd Bank to:

- Increase insurance adoption among existing banking customers.
- Improve policy renewal rates and customer retention.
- Simplify policy management and claims.
- Drive cross-sell opportunities across multiple insurance categories.
- Create long-term customer engagement through value-added services.
- Differentiate itself from traditional insurers through superior digital experiences.

Your Challenge

Design a mobile-first platform that goes beyond purchasing insurance.

Your solution should help customers throughout their insurance lifecycle.

Consider experiences such as:

- Discovering suitable insurance products based on customer profile and life stage.
- Comparing policies in a simple and transparent manner.
- Purchasing and managing multiple policies from one place.
- Filing, tracking and managing claims digitally.
- Personalized renewal reminders and proactive recommendations.
- AI-powered assistance for insurance education and customer support.

- Integration with relevant services including:
 - Health & wellness
 - Vehicle servicing
 - Roadside assistance
 - Telemedicine
 - Home assistance
 - Emergency support
 - Travel services
 - Any innovative ecosystem integrations you believe create customer value.

The solution should be simple, intuitive, scalable, and aligned with IndusInd Bank's digital ecosystem.

Focus Areas

You are free to design your solution around one or more insurance categories:

- Health Insurance
- Motor Insurance
- Home Insurance
- Travel Insurance
- Pet Insurance
- Cyber Insurance
- Rental Insurance
- Or a unified experience covering multiple categories.

Clearly justify your product scope and target persona.

Deliverables

Product Strategy

- Product Understanding & Industry Overview
- Market Research & Competitor Analysis
- Target User Persona
- Problem Statement & Opportunity Sizing
- Product Vision & Value Proposition

Product Execution

- Success Metrics & North Star Metric
- GTM Strategy
- Product Roadmap
- Assumptions & Risks

Product Design

- User Journey
- Key User Flows
- Feature Prioritization (RICE / MoSCoW / any framework)
- Low or High Fidelity Wireframes
- Prototype Walkthrough

Bonus (Optional)

Include any of the following if relevant:

- AI-powered experiences
- Claims automation
- Fraud detection concepts
- Personalization engine
- Monetization strategy
- Technical architecture
- Data & analytics instrumentation

Business Objective

Submission Requirements

1. Presentation Deck (Maximum 15 Slides)
2. Clickable Prototype (Figma, Lovable, Bolt, Replit, Cursor or any preferred tool)
3. LinkedIn Post (Mandatory for the 10% LinkedIn evaluation component)
4. A short demo video (Optional)

Evaluation Breakdown

Component	Weightage
Problem Understanding & Research	20%
Product Strategy & Innovation	20%
Product Design & Prototype	20%
Product Execution (Prioritization, Metrics, Roadmap, GTM)	20%
Presentation & Communication	10%
LinkedIn Post	10%

LinkedIn Post Criteria (10%)

- Share your capstone project on LinkedIn.
- Briefly explain the problem, your solution, and key learnings.
- Tag **E-Cell IIT Guwahati** and use relevant hashtag(s).
- Include at least one visual from your presentation or prototype.

Scoring:

- Meets all submission requirements: **10%**
- No LinkedIn post submitted: **0%**
