TrustFix

Solving the Trust & Coordination Chasm in Home Services

A Go-To-Market and MVP Strategy from Concept to Launch

By Chhavi Tanwar

01 THE MARKETPLACE DOUBLE-BIND

Core Message: TrustFix isn't just a discovery engine; it is a trust-infrastructure network. The primary barrier to market growth isn't a lack of professionals or customers; it's asymmetric information causing mutual anxiety.

Customer Problems

- Unsure whether the professional is genuine
- No standard pricing
- Late arrivals
- Fake or manipulated reviews
- Poor post-service support
- Hard to compare providers

Provider Problems

- Irregular work opportunities
- Difficult to build credibility
- Compete only on price
- No long-term customer relationship

Key Insights

- Customers don't struggle to find plumbers. They struggle to trust them.
- That becomes our product vision.

02 USER PERSONA - The Anxious Customer

Riya Sharma

Occupation: Software Engineer

Location: Kanpur, India

Age: 29

Tech / Engineering

Mobile-first user

Behaviors

- Lives alone and needs AC repair urgently
- Relies on local WhatsApp groups or word-of-mouth
- Highly digitally literate
- Values time and safety above minor cost differences

Pain Points

- Fear of safety/unverified people entering the apartment
- Anxiety over arbitrary "post-service" price hikes
- Wasted hours waiting for professionals who delay without notice

Goals

- Safe professional
- Fixed pricing
- On-time arrival

Key Needs

- Total pricing transparency
- verified professional identity

03 USER PERSONA - The Stressed Professional

Rajesh Kumar

Occupation: Electrician

Location: Kanpur, India

Age: 38

8 years experience

Behaviors

- Operates via a small local network
- Utilizes smartphones primarily for basic communication (WhatsApp/Calls)
- Low tech-fluency for complex UI

Pain Points

- Depends on word-of-mouth
- Few repeat customers
- Highly inconsistent income with dry patches throughout the month
- No digital track record or brand to justify charging premium rates

Goals

- More bookings
- Build reputation
- Fair earnings

Key Needs

- Simplistic, low-text interface to secure consistent local jobs without complex administrative overhead

"Making Trust Measurable."

Unlike existing marketplaces, TrustFix helps users make confident booking decisions through transparency and accountability.

Core Principles

- ✓ Verified Professionals
- ✓ Transparent Pricing
- ✓ Real-time Tracking
- ✓ Trust Score
- ✓ Service Guarantee

Instead of just connecting users and providers, TrustFix reduces uncertainty at every stage.

Core Features

1. Trust Score™
2. Government Verified Professionals
3. Transparent Price Estimate
4. Live Tracking
5. Arrival Guarantee
6. Digital Job Card
7. Before/After Photos
8. Easy Rebooking

The Three Pillars of TrustFix

- 1. The Predictable Pricing Engine:** Standardized, upfront rate cards per task (e.g., "AC Cleaning - Base Rate ₹X"). Eliminates haggling.
- 2. Verified Credential Layer:** Multi-step background check (Identity + Basic skill validation) displayed via simple badges to build customer psychological safety.
- 3. Low-Friction Bridge:** An optimized customer booking flow paired with an automated, ultra-simple "Accept/Reject via SMS/One-Tap" flow for professionals to account for low digital literacy.

Framework Used: Value vs. Complexity (Prioritizing ruthlessly due to limited engineering resources)

Feature	Targeted User	MVP? (Yes/No)	Rationalization
Upfront Standardized Pricing	Customer	Yes	Crucial to solve the "predictable pricing" pain point directly.
OTP-Verified Job Start & End	Both	Yes	Low-cost feature ensuring accountability and safety.
One-Tap Job Acceptance Flow	Professional	Yes	Essential due to low digital literacy constraints.
In-App Real-Time Chat	Both	No	High Complexity. Fallback to direct call masking for the MVP stage.
AI-Driven Dynamic Surge Pricing	Platform	No	High Complexity. Standard static rates suffice for launch.

Step 1 (Discovery): Customer selects a clearly defined category -> views fixed base pricing -> taps book.

Step 2 (Matching): System pings the nearest verified professional. The professional receives a clear, big-button prompt showing the location and payout.

Step 3 (Execution): Professional arrives -> Customer shares an "Arrival OTP" to begin -> Work completed -> "Completion OTP" entered.

Step 4 (Settlement): Cashless or simple digital payment collected -> Two-way binary rating (Thumbs Up/Down for speed).

The Cold Start Strategy: Constrain constraints. Launch in **one specific city** (e.g., Bangalore) and only **two high-frequency categories** (e.g., Electricians and AC Repair) to concentrate liquidity.

Supply-Side Acquisition (The Anchor): Direct offline onboarding at hardware wholesale markets and local hubs. Offer a "Guaranteed Minimum Daily Payout" for the first 30 days if they stay online, mitigating their risk of trying a new platform.

Demand-Side Acquisition: Geo-targeted hyper-local digital ads focusing entirely on safety and price guarantees, combined with physical flyers distributed in target residential apartment complexes.
