

Product Matters 6.0 - Week 1 :Assignment 1

Product Teardown & Feature Innovation Challenge

1 | Business Context: Building Better Products

Every successful digital product solves a user problem. However, user expectations evolve, competition intensifies, and new technologies continuously reshape customer behavior. Products that fail to adapt often lose engagement, retention, and market relevance.

Product Managers play a crucial role in understanding users, identifying pain points, and driving product improvements through data, strategy, and user-centric thinking.

As a Product Manager, your ability to analyze existing products and identify opportunities for improvement is one of the most valuable skills in the industry.

2 | The Challenge: Think Like a Product Manager

You have been hired as a Product Analyst for a leading digital product of your choice.

Your objective is to deeply understand the product, evaluate its current user experience, identify key user pain points, and propose a meaningful feature innovation that improves the product.

This is not a design challenge alone. This is a Product Thinking challenge.

You are expected to move beyond surface-level observations and demonstrate structured problem-solving by applying concepts learned throughout Product Matters 6.0.

Possible products include:

- Swiggy
- Zomato
- Uber
- Spotify
- LinkedIn
- Instagram
- Google Maps
- Blinkit
- Zepto
- Duolingo
- YouTube

Or any other digital product of your choice.

3 | Product Analysis & User Understanding

Your analysis should account for:

Product Understanding

- What problem does the product solve?
- Who are its primary users?
- What value does it create?

Product Life Cycle Analysis

Determine the current Product Life Cycle stage:

- Introduction
- Growth
- Maturity
- Decline

Support your conclusion with logical reasoning.

User Persona Creation

Develop one detailed user persona including:

- Demographics
- Goals
- Motivations
- Frustrations
- Key needs

User Flow Mapping

Select one core user action and map the complete user flow.

Examples:

- Ordering food on Swiggy
- Booking a ride on Uber
- Creating a playlist on Spotify
- Applying for jobs on LinkedIn

4 | Your Mission: Identify, Critique & Innovate

We expect a clear product-thinking process across two phases.

Phase 1: Product Critique (Find the Friction)

Evaluate the current product experience.

Identify:

- What works well
- What does not work well
- Areas of friction
- Missed opportunities
- Key user pain points

Support your observations with evidence and logical reasoning.

Phase 2: Feature Innovation (Design the Improvement)

Based on the identified pain point:

Design a feature that improves the user experience.

Your proposal should explain:

- The problem being solved
- Why the problem matters
- Proposed feature solution
- Expected user impact
- Expected business impact

Apply First Principles Thinking wherever possible.

5 | Deliverables

Your final submission should function as a product recommendation deck that demonstrates your understanding of users, product strategy, and feature innovation.

Deliverable A: Product Analysis Deck (5–8 Slides)

Include:

1. Product Overview
2. Product Life Cycle Analysis
3. User Persona
4. User Flow
5. Product Critique
6. Feature Proposal
7. Expected Impact

Deliverable B: Wireframe / Prototype

Create a low-fidelity wireframe showcasing your proposed feature.

Accepted tools:

- Figma
- Excalidraw
- Hand-drawn sketches

The wireframe should clearly communicate how users will interact with your solution.

6 | Evaluation Criteria

Parameter	Weightage
Product Understanding	10
PLC Analysis	10
User Persona	15
User Flow	15
Product Critique	20
Feature Innovation	20
Wireframe & Presentation	10

7 | Submission Guidelines

- Individual Submission
- PDF Format Only
- Maximum 8 Slides
- Original Work Only
- Use visuals wherever possible
- Clearly mention the chosen product

What We Are Looking For

We are not evaluating how complex your feature is.

We are evaluating whether you can:

- Think like a Product Manager
- Understand users deeply
- Structure your analysis

- Apply PM frameworks correctly
- Identify meaningful opportunities
- Propose practical solutions
